Redmond, WA · (206) 538-4472 · judykangsh@gmail.com

Education

University of Washington, Seattle | B.S in Computer Science

Sep 2021 - Dec 2025

Work Experience

Software Engineer Intern | Actual AI

Nov 2025– Aug 2026

- Architected Architecture Decision Record auto-sync end-to-end with background polling on a circuit breaker, snapshot caching to skip redundant reloads, and a unified sync status UI replacing scattered per-page indicators, closing the core product value loop without user intervention.
- Shipped full-stack per-repo PR-creation toggle with a Supabase migration, repo settings hook with test coverage, and settings-modal wiring, unblocking a customer segment blocked on unwanted auto-PR behavior.
- Built the categories system from scratch with hierarchical drill-down, ADR status counts, URL-routable filtered views, inline assignment dropdown, and a race condition fix on auto-categorization during manual ADR creation.
- Resolved cross-cutting frontend reliability issues including hydration mismatches, scrollbar-induced layout shifts, stale-data leaks on refetch, optimistic state on aborted requests, and duplicate-key React warnings.

Software Developer | Associated Students of University of Washington (ASUW)

Sep 2024 – Jun 2025

- Built a full-stack ranked-choice vote processing platform serving 50K+ students implementing CSV ingestion, secure data validation pipelines, and IRV tallying logic from scratch.
- Built interactive dashboards in JavaScript for visualizing election outcomes, and demographic breakdowns.
- Standardized UI components and accessibility compliance across 30+ campus entity sites, reducing content update friction for non-technical stakeholders.

Software Engineering Intern | Datafi

Jun 2024 - Aug 2024

- Redesigned route hierarchy and refactored layout logic in Vue.js, delivering responsive components aligned directly with CEO and PM product direction.
- Implemented role-based access control with consistent permission enforcement across the app to conditionally render features by permission level.

Projects

AI Chat Calendar Assistant | Vue.js, Javascript, OpenAI API, Google Calendar API, OAuth 2.0

- Developed a GPT-powered chat assistant with Vue.js, Javascript & OAuth integration, enabling natural language management of Google Calendar events with conflict detection, input validation, and ambiguity resolution.

AI Hyper-personalized Shopping Assistant | Python, React, Typescript, Javascript, CSS

- Awarded 1st place at Pioneer Square Labs pitch competition class for designing a personalized AI shopping assistant that recommends products tailored to user preferences and style

Skills

- **Languages & Frameworks:** Java, Python, JavaScript/Typescript, C, C++ SQL, React, Vue, PHP, Node.js, Express
- **Tools & Technologies:** Git, Linux, Bash, JUnit, Jest, Tableau, Power BI, HTML/CSS, Figma, Storybook
- **Spoken Languages:** Korean (Native), Spanish (Native), English (Bilingual), French (Elementary)

Leadership

Co-Founder & Co-president | Tech Entrepreneurship Student Organization

Jun 2023 – Jun 2024

- Created a community of 200 members & led a 6-week program to guide members from ideation to execution
